                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The family Pasteurellaceae encompasses several pathogens that infect a wide variety of animals. The present invention relates to virulence genes from Pasteurellaceae. The present sequence is a protein encoded by one such virulence gene. The virulence genes of the present invention may be mutated in order to produce an inactive gene. The inactive virulence gene may in turn be used to produce a vaccine, which is useful for treating bacterial infections such as septicemias, bronchopneumonias, rhinitis and wound infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protease and associated protein-18; PPRG-18; anti-PPRG antibody; dagnosis; treatment; cell proliferative disorder; cancer; cirrhosis; arteriosclerosis; atherosclerosis; bursitis; hepatitis; immune disorder; AIDS; Addison's disease; adult respiratory distress syndrome; allergy; ankylosing spondylitis; amyloidosis; cytostatic; antiarteriosclerotic; hepatototropic; antiarialmamatory; virucide; antipsoriatic; anti-HIV; antiallergic; immunosuppressive; antidiabetic; antianaemic;

RESULT 1

```
bacterial ALL protein may be complexed with a therapeutic agent to transport the agent across the gastrointestinal membrane barrier by transcytosis to increase bicavailability 5- to 100-fold. The delivery system allows improved transport across enterocytes and peyers patch M-cells. The system is not prone to degradation in the quit or early release of blologically active material, and eliminates the need for parenteral administration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Therapeutic delivery system utilising bacterial invasin protein - is not readily degraded in the gut, enhances systemic bio-availability of therapeutic agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence represents a fusion protein of a Yersinia enterocolitica attachment-invasion-locus (AIL) protein (AAR86207) with maltose binding protein (MBP, AAR96208). The MBP N-terminal portion of the fusion protein acts as an affinity tail, allowing efficient recombinant protein purification by amylose affinity chromatography. The receptor binding region of the AIL protein involves all or some of the regions from the 4 extracellular loops. This region retains the binding affinity of the protein, and may be

The Nph1 and Nph2 polypeptides can be expressed by standard recombinant methodology. The Nph1 and Nph2 polynucleotides or polypeptides can be used to enhance acquired resistance in plants (e.g. wheat or rice) to control plant pathogens e.g. the genes can be introduced to make transgenic plants with increased disease resistance. The polynucleotides are also useful to produce probes and primers useful to detect the polynucleotides (to identify transgenic plants containing an acquired resistance gene) and to isolate similar sequences e.g. from other species. The polypeptides can be used to make antibodies useful to monitor protein production e.g. in transgenic plants. The present sequence represents the amino acid sequence of the wheat Nph2-1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New acquired resistance genes Nphl from rice, Oryza sativa, and Nph2-1 and Nph2-2 from wheat, Triticum aestivum, useful for producing transgenic plants with increased disease resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 59 LILTLERIKLPDDVMGDMKIRSSLAREGVIGSFAWVDPGWDGNLTLMLYNASNEPVELRY 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A sequence encoding a thermostable DNA ligase was cloned into the plasmid ppam-13. The DNA ligase is APP dependent and is useful for detecting nucleic acids by hybridising two oligonuclectides with adjacent sequences of the target nucleic acid, ligating the two oligonuclectides (using the ligase) and detecting the ligation product. Analysis of the fragment revealed three other open reading frames (ORF's). This is a polypeptide encoded by ORF3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             12 ILIEPFSEESLQPAGYDLRVG-----REAFVKGK----LIDVEKEGKVVIPPREYA 58

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó;
                                                                                                                                               This is the amino acid sequence of the P45 component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 3638.

The sequence is predicted from a DNA sequence (see AAV63860) obtained from genomic DNA by PCR. P45 and P50 (see AAW72844) are the predominant components of PEF, which acts to enhance the activity of P. Furiosus DNA polymerase. P45 functions as a dUTPase, and can be used to enhance nucleic acid replication, polymerisation or PCR reactions. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases, as well as DNA constructs and antibodies. Also included are methods for identifying compositions with PEF activity, for purifying and using these compositions, and specific extracts, proteins and complexes that function to enhance polymerase activity. Whicher acid polymerase reactions can be enhanced (claimed) by mixing a nucleic acid template, at least 1 polymerase and a composition having polymerase enhancing activity. Kits are provided for replicating nucleic acid sequencing or amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 LTLERIKLPDDVMGDMKIRSSLAREGVIGSFAWVDPGWDGNLTLMLYNASNEPVELRYGE 120

                                                                                                                                The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, in the examplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Corynebacterium glutamicum; metabolic pathway protein; MP protein; fine chemical production; microorganism; organic acid; nucleoside; nonproteinogenic amino acid; purine base; pyrimidine base; nucleotide; lipid; saturated fatty acid; unsaturated fatty acid; diol; vitamin; carbohydrate; aromatic compound; cofactor; polyketide; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |::|| |: ||: ||: ||: ||: ||: ||: ||| ||: ||: ||| ||: ||: ||| ||: ||: ||| ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: ||: |

AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, putine and pyrimidine bases, nucleosides, nucleotides, incleding status acids, acids, diols, carbohydrates, ilpids, compounds, vitamins, cofactors, polyketides and enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acids from Corynebacterium glutamicum encoding metabolic pathway proteins, useful for producing fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, and purine and pyrimidine bases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zelder O, Haberhauer G;

The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).

```
The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with in pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. In pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAY36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye
                                                                                                                                                                                                                Vaccine; eye disease; conventional trachoma; nonendemic trachoma; paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; bartholinitis; pneumopathy; venereal lymphogranulomatosis.

AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyagitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae mucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   si-tddvcivppnsfalarsveyfriprnvltmciqkstyarcqiivnvtpfepeweghv 136

This invention relates to a full length provirus genomic DNA sequence AAC66881 of equine infectious anemia virus (EIAV) from the donkey leukocyte strain. Included in the invention are the gag, pol, env, rev, tat, and S2 gene sequences AAC66314 - AAC66319 and their encoded proteins AAB35754 - AAB35759. The invention also relates to PCR primers AAC66282 - AAC66389 which are used to isolate the EIAV DNA sequences other primers represented in AAC66289 - AAC66313 are also used in the sequences identified in the invention. The genes and proteins can be used for preparing gene mutation and deletion vaccines, DNA vaccines and flagnostics and in producing an equine infectious anemia virus gene transfer system for gene therapy. The proteins and polynucleotides may also be used in the study of HIV.
                                                                                                   Equine infectious anemia virus; EIAV; donkey leukocyte strain; vaccine; gene therapy; human immunodeficiency virus; pol; HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Full-length DNA sequence of provirus genomes, sequences of various functional genes and protein of dondey leukocyte strain of equine infectious anemia virus, used for preparing vaccines and studying HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      :|::| | : :||:||::| ::| | ::| | ::| | ::| | ::| | ::| | ::| | | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::| | ::
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63 LERIKLPDDVMGDMKIRSSLAREGVIGSFAWVDPGWDGNLTLMLYNASNEPVELRYGERF 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a Pseudomonas aeruginosa polypeptide sequence. P. aeruginosa is an opportunistic human pathogen present in soil water and plants. The specification describes virulence polypeptides and nucleic acid sequence encoding such polypeptides. These sequences can be used to identify a compound which is capable of decreasing the expression of a pathogenic virulence factor. Compounds that inhibit the expression or activity of virulence factor polypeptides can be used to treat pathogenic infections, especially where the infection is a P. aeruginosa infection.

In some listances assumptions were made as to the identity of the residue; it is therefore possible that the sequence given is not entirely correct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      50 VVIPPREYALILTLERIKLPDDVMGDMKIRSSLAREGVIGSFAWVDPGWDGNLTLMLYNA 109

A transformant selected for growth at 39 deg was cultured overnight. Recombinant human dUTPase was purified and shown to be identical in sequence to the natural protomeric peptide (AAR70144).
                                                                                                                                                                                                                                                                                                                              Pure native human deoxyuridine tri:phosphate nucleotido:hydrolase used to identify inhibitors, potentially useful as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a Pseudomonas aeruginosa polypeptide sequence. P. aeruginosa is an opportunistic human pathogen present in soil water and plants. The specification describes virulence polypeptides and nucleic acid sequence encoding such polypeptides. These sequences can be used to identify a compound which is capable of decreasing the expression of a pathogenic virulence factor. Compounds that inhibit the expression or activity of virulence factor polypeptides can be used to treat pathogenic infections, especially where the infection is a P. aeruginosa infection.

Is a P. aeruginosa infection.

In some instances assumptions were made as to the identity of the residue; it is therefore possible that the sequence given below is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EGKVVIPPREYALILTLERIKLPDDVMGDMKIRSSLAR--EGVIGSFAWVDPGWDGNLTL 104

                                                                                                                                                                                       This polypeptide comprises the nuclear form, designated DUT-N, of muman devayuridine triphosphate nucleotidohydrolase (dyrbase). Its amino acid sequence was deduced from a T-cell cDNA clone (see AAT90987). A single gene codes for 2 isoforms of human durpase, the nuclear form (DUT-N) and a cytoplasmic form (DUT-N, see AAT80381) which is targeted to the mitochondria. The isoforms arise by the use of alternative 5 exons which then join in a common sequence. The DUT-N isoform is produced at low or undetectable levels during non-proliferative periods of the cell cycle, and can be used as a marker for cellular proliferation. It is phosphorylated by plactoc2 at a Ser residue within the consensus sequence for cyclin-dependent can be used to determine its proliferative status (or changes in this status), particularly in nutrient-deprived or neoplastic cells can be used to determine on be used for determining the effect of calmed). This method can be used for determining the effect of claimed). Agents that inhibit durpase are potential

(claimed). Agents that inhibit durpase are potential

can inneoplastic, antiviral, antibacterial and antifungal agents.

(The durpase can also be used to raise antibodies for assaying the

This polypeptide comprises the mitochrondrial form, designated DUTA, of human decoyuridine triphosphate nucleotidohydrolase to DUTA, of human decoyuridine triphosphate nucleotidohydrolase (dUTPASS). Its amino acid sequence was deduced from a fibroblast CDNA clone (see AAT90989). A single gene codes for 2 isoforms of human dUTPASS, the nuclear form (DUTA, N. see AAN90280) and the cytoplasmic form (DUTA) which is targeted to the mitochondria. The isoforms arise by the use of alternative S exons which then join in a common sequence. The DUTA isoform is detectable in proliferating and non-proliferating cells, but is produced in tumours. Unlike DUTA, it is not phosphorylated in vivo. Measuring the amount of dUTPASS of non-proliferation in certain tumours. Unlike DUTA, it is not phosphorylated in vivo. Weasuring the amount of dUTPASS in this status), particularly in nutrient-deprived or neoplastic cells (claimed). This method calls, or monitoring the effect of (A) (claimed). Agents that including tumpasse are potential antineoplastic, antiviant, antibacterial and antifungal agents. The dUTPASS can also be used to raise antibodies for assaying the enzyme and for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels 16; Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                        1 MLLPDWKIRKEILIEPFSEE......PYRGNYQGSTRLAFSKRKKL 156

Sequence 11. Application US/08024405

Patent No. 596224

Patent No. 596224

Sequence 11. Application US/08024405

Patent No. 596224

APPLICANT: Ladner, Robert D.

APPLICANT: Caradonna, Salvatore J.

TITLE OF INVENTION: Diagnostic and Other Uses

TORRESPONDERS: Dechert, Price & Rhoads

STREET: 4000 Bell Atlantic Tower, 1717 Arch Stre

CITY: Philadelphia Alantic Tower, 1717 Arch Stre

COUNTRY: USA

COUNTRY: USA

COUNTRY: Diskette

COMPUTER: Lad Compatible

OPERATING SYSTEM: DOS

SOFTWARE: FastERO for Windows Version 2.0

CHASSIFICATION NUMBER: US/08/824,405

FILING DATE: 26-MAR.1997

FILING DATE: TOWERT ON DATA:

APPLICATION NUMBER: COUNTRY OF TOWERT ON 
                                                                                                                           ZIP: 20005
COMPOUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
MODIUM TYPE: Floppy disk
COMPUTER: IBM PC COMPAtible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/822,774
FILING DATE: 21-MAR-1997
CLASSIFICATION HARR-1997
ATCASSIFICATION NUMBER: 36.576
ATTORNEX/AGENT INPORMATION:
NAME: KULIK, David J.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 38, Application US/08822774
Patent No. 618397
GENERAL INFORMATION:
APPLICANT: HOGREFE, Holly
TITLE OF INVENTION: Extracts, PEF Protein Complexes, Isolated PEF Proteins,
TITLE OF INVENTION: BYLEACES, PEF Protein Complexes, Isolated PEF Proteins,
TITLE OF INVENTION: and Methods for Purifying and Identifying Same
NUMBER OF SEQUENCES: 61
CORRESPONDENCE ADDRESS:
ADDRESSEE: David J. Kulik, Evenson, McKeown, Edwards &
ADDRESSEE: Lenahan, P.L.L.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB 4; Length 42; 3.9e-13;

OM protein - protein search, using sw model

January 31, 2002, 13:39:15; Search time 46.78 Seconds (without alignments) 10.189 Million cell updates/sec Run on:

US-08-957-709-72 13 Title: Perfect score:

1 XGXXDXXXGXXXX 13 Sequence: OLIGO Gapop 60.0 , Gapext 60.0 Scoring table:

100059 seqs, 36664827 residues Searched:

0 Word size :

100059 Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Listing first 45 summaries

SwissProt\_39:\* Database : Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: NEUROEXCITATORY PEPTIDE; INCREASES THE IMPULSE FREQUENCY AND PRODUCES A SPIKE BROADENING OF THE IDENTIFIED HEART EXCITATORY NEURON (PON); ALSO ENHANCES THE AMPLITUDE AND FREQUENCY OF THE HEART BEAT. HAS ALSO AN EFFECT ON SEVERAL OTHER MUSCLES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -i- COFACTOR: MOLYBDENUM.

"Purification and synthesis of eosinophilotactic tetrapeptides of human lung tissue: identification as eosinophil chemotactic factor of anaphylaxis.";

Proc. Natl. Acad. Sci. U.S.A. 72:4123-4127(1975).

-I. MISCELLANDOUS: THEER PEPPIDES ARE RELEASED FROM MAST CELLS IN LUNG (AND OTHER ISSUES) DURING HYPERSENSITYUTY REACTIONS (ANAPHYLAXIS). THEIR ACTIVITIES, PREFERENTIALLY AFFECTING EOSINOPHILS, INCLUDE CHEMOTAXIS, CHEMOTACTIC DEACTIVATION, RELEASE OF ENZYMES, AND STIMULATION OF THE HEXOSE MONOPHOSPHATE SHUNT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

A; Title: The primary structure of porcine glicentin (proglucagon).

A; Reference number: A94233; MUID: 81248172

A; Molecule type: protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ď.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 4
T05708
auxin-induced protein IAA9 - tomato (fragment)
C:Species: Lycopersicon esculentum (tomato)
C:Accession: 109708
R:Nebeniuehr. A.; Lomax, T. L.
Submitted to the EMBL Data Library, September 1997
A:Description: Auxin-regulated LelAA genes of tomato.
A:Reference number: 215303
A:Accession: T05708
